About me

Hi, my name is Jhosbel Vargas. I started programming thanks to the recommendation of a friend many years ago and since then I have been involved in the world of development learning more about new technologies.

My greatest achievement so far has been being in charge of developing a project completely from scratch for the company I have worked for after demonstrating my skills acquired over time. I am proud of the work I did and although it could not be completed with the application due to external agents, I can say that it was a very enriching experience.

Experience

- Front-End Developer • GROOVY Company, Inc.

  Nov 2022 – Jan 2024

  - CHIMBA Blockchain, is a project designed using Cosmos SDK.

  - Website designed in Angular, showing the user's information about the project, as well as the links to register and download the app and web extension3, stylized using CSS guided by the design.

  - Chimba Explorer designed in React, stylized using Chakra UI, the explorer allows users to see their transactions and the number of blocks in the chain.

  - Amazonia designed in React, using the Cosmos SDK to connect via web3, allows you to perform transactions such as sending tokens, creating and voting on proposals, performing tasks, etc. It was styled using Bootstrap.

- Full-Stack Developer • GROOVY Company, Inc.

  Nov 2023 - Jan 2024

  - OTCMarket is a web application designed so that users can summarize large blocks of text using the OpenAI API and publish them on different social networks without having to enter them to publish them, using Next.js to make the Frontend and NestJS to make the Backend using Tailwind to style it.

Skills

HTML5	NextJs	NestJs
CSS3	NodeJs	BootStrap
JavaScript	Express	Tailwind
Typescript	MongoDB	
NextJs	GitHub	
React		

Education

Responsive Web Design - FreeCodeCamp

JavaScript From Scratch - EDTeam
